

Travel & Transportation Application Services

New Revenue Created through Improved Web Services

Who is the client?

Since opening shop in New York in the 1930's, this Client has become the leading authority of European rail in North America, representing more than 35 European railroads. They currently help more than one million visitors each year discover the rich heritage and scenic landscapes of Europe by train.

Improved websites

What was the need of the client?

The objective was to build a high-performance, next-generation distribution system to use J2EE technologies, enhance user experiences and improve performance. These improvements included reducing booking time of its call center agents and offering core technological services to its customers. This created new revenue opportunities through the deployment of additional services such as web services and improvement of existing websites.

Standardized J2EE platform

What Services did Data-Core provide?

The following tasks were performed by Data-Core to achieve the project's objective:

Developed implementation plan that met Client's aggressive time-to-market objectives. Conducted architecture assessment to identify quality-of-service requirements mapped against user requirements. Improved quality of existing code. Designed application for both client and application services platforms and then worked with the Client to implement solution. Provided production deployment guidance.

Travel & Transportation Application Services

Client now meets higher sales targets

Improved time to market

In Summary:

As a result of this project, the Client improved the time to market. The open standards-based architecture allows for the virtual, seamless provisioning of new services and integrates applications from third-parties for future growth. Better system performance has also helped the Client attain higher sales targets by reducing time taken to make a reservation. Data-Core continues to be the primary vendor for these engagements and provides architecture and implementation services.
